- Moral or Political Projection → significant difference (score=0.107)

Human Readable Insights

- Positive reviews show that a subjective pattern is observed.
- Positive reviews show that a subjective pattern is observed.
- Negative reviews show that a subjective pattern is observed.

Bias Definitions & High Confidence Examples

Expectation Bias

Definition: This occurs when a reviewer judges a movie based on what they expected it to be rather than evaluating what it actually was.

Example Review:

The movie had a premise that sounded interesting at first, but the final result did not live up to the idea behind it. The story was my biggest disappointment.

Confidence Score: 0.97

Comparative Lens

Definition: The reviewer evaluates a movie by comparing it to another film, book, or reference material.

Example Review:

First of all, those who are comparing this to Interstellar or Martian need to get a mental check-up.

Confidence Score: 0.98

Representation Critique

Definition: The reviewer questions how accurately characters, groups, or perspectives are represented in the film.

Example Review:

A molecular biologist (Ryan Gosling), who has always held a minority opinion, works as a substitute teacher and is recruited by an ESA employee (Sandra Hüller) for the Hail Mary project.

Confidence Score: 0.98

Omission Focus

Definition: The reviewer highlights important topics or details that were left out of the film.

Example Review:

Complete lack of story as written.

Confidence Score: 0.96

Moral / Political Projection

Definition: The reviewer inserts their own moral or political viewpoint into the evaluation.

Example Review:

But big-budget films these days often seem designed to discourage independent thought.

Confidence Score: 0.97

Selective Emphasis Bias

Definition: The reviewer focuses intensely on one specific aspect while ignoring the rest of the film.

Example Review:

I'm giving it two stars for the visual effects, that's the only thing this film has going for it.

Confidence Score: 0.98

Performance Appraisal

Definition: Focuses on actor performance, delivery, or mannerisms.

Example Review:

The actors also played their parts very well.

Confidence Score: 0.98

Authenticity Bias

Definition: The film is judged on factual or technical accuracy.

Example Review:

I cannot speak to whether this film is accurate to the book or not but the film definitely works on its own.

Confidence Score: 0.96

Disposition Bias

Definition: Personal likes or dislikes influence the reviewer's judgment.

Example Review:

Don't get me wrong-I love The Muppet Show.

Confidence Score: 0.97
